EDUCATION

Stevens Institute of Technology, Hoboken NJ

GPA: 3.969

Bachelor of Science in Computer Science

Expected Graduation May 2026

- **Honors:** Edwin A. Stevens Scholarship, Dean's List
- **Relevant Coursework:** Game Design, Web Programming, Database Management Systems, Deep Learning, Data Structures, Algorithms, Computer Architecture & Organization, Systems Programming, Operating Systems, Principles of Programming Languages, Theory of Computation, Concurrent Programming, Computer Security, Discrete Structures, Compiler Design & Implementation, Mobile Systems & Applications, Knowledge Disc. & Data Mining, Linear Algebra, Intermediate Statistics, Mechanics

Waldwick High School, Waldwick NJ

Valedictorian

Graduated June 2022

EXPERIENCE

Full Stack Game Developer

September 2025 - Present

Charity Quest: Turf Wars

Game Revenant Ltd.

- Designing, prototyping, and shipping a real-time strategy game expansion for the Charity Quest philanthropic network with the founder and a team of four developers using Unity, Supabase, PlayFab, and Mapbox
- Developing JavaScript & PostgreSQL backend systems for live game data, and C# UI on the Unity mobile frontend
- Conducting frequent playtests open to all 16,000+ current Charity Quest users to gather analytics and player feedback to iterate on gameplay mechanics and adjust game balance
- Using Git for Unity version control, managing branches, merges, and collaborative development workflows

TECHNICAL SKILLS

Languages / Frameworks:

- C, C++, C#, GDScript, JavaScript, Java, Python, Lua, OCaml, Erlang, ARMv8, x86, Bash, SQL, HTML, CSS, R, LaTeX
- PyTorch, Svelte, ExpressJS, LÖVE

Operating Systems:

- Linux (Ubuntu/Debian), Windows, MacOS

Software:

- Unity, Godot, Android Studio, Supabase, PostgreSQL, Azure PlayFab, Mapbox, Microsoft 365 (Office), Google Workspace, Slack, Git

PROJECTS

chess-board

January 2025

A 2-player interactive chess board made in the LÖVE framework in Lua

- Implemented an algorithm that finds the piece the player's mouse is clicking on
- Implemented quality-of-life search algorithms that prevent players from making illegal moves
- All assets created from the ground up

tiny-shell

March - April 2024

A fully functional, custom REPL for Linux made in C

- Reconstructed several existing Bash shell commands (cd, lf, lp, pwd, etc.)
- Utilized fork() and exec() functions to support extraneous commands
- Applied signal handling for interrupted processes (Ctrl-C)
- Implemented helpful error code messages
